Clear-Tac™

PALLET ADHESIVE+MASK

**The no mess, TWO-IN-ONE film product
for 100% Cotton low-lint garments.**

Heavy-duty 10 mil. Poly Film is coated with contact adhesive on both sides. Clear-Tac comes in 18" wide rolls with 72 yards of release liner for easy handling. Each roll can cover a minimum of 144 pallets at 18" x 20" size.

APPLICATION TECHNIQUE:

1. Make certain your pallets are well-cleaned and dry for best adhesive application.
2. Cut a piece of Clear-Tac to fit the platen slightly smaller than its full size.
3. Locate and tack a leading edge of the film and burnish outward onto platen surface.
4. Burnish evenly from one corner/edge gradually across the platen surface to help remove trapped air bubbles.
5. Use fingernail or knife edge to lift corner of the Clear-Tac backing sheet and slowly pull off at an angle low to the surface.
6. Use a pin and the burnishing card to pop and flatten any remaining air bubbles.
7. Repeat on all platens and you're ready to print.
8. When lint builds up to a loss of tack, use a slightly damp cloth or light/fine mist spray of water and cloth to wet and easily remove the excess lint.
9. Send the platen under a flash to quickly evaporate moisture residue and return the surface to it's original tack.
10. Properly applied and maintained, it can last over several days to a week, and easily peels off to make way for a new layer.

Contact us for custom roll widths other than 18". This product is not intended for use with other adhesives and is not recommended for high-lint garments.
